Creating a better world through connected mobility for all.

Toyota Connected is a new company designed to redefine the world's mobility experience. We are delivering customer-focused products that aim to increase our access, convenience and, in some cases, fun!

Toyota Connected Europe is looking for a Mid UI/UX Designer to join the design team developing OneApp, Toyota's global car companion app.

You will be joining us at the beginning of Toyota Connected Europe's journey of building our team and products used by millions. Working closely with our design and product teams, responsible for delivering the strategic and visual design of large-scale, distributed software applications, systems and services.

You will be designing the global companion app for Toyota, Lexus and Subaru vehicles, delivering large-scale, distributed software applications, and mobile experiences. You will be responsible for designing global-scale applications and services that will enable users to engage with their vehicles in never-before-seen ways.

If you are results driven, deeply innovative, and interested in working on a team dedicated to delighting and improving the experience of all Toyota Customers, we want to talk to you!

You will:

- Work alongside a talented team of designers and engineers to build world-class applications and services.
- Work as part of a team-oriented, Agile software engineering environment
- Own delivery of features from top to bottom, from concept to design to development handoff
- Participate in designing a visual system that will enable rapid and scalable application design in the future.
- Participate in the larger design community including conferences, open-source contribution, UX writing, etc.
- Thrive as an independent, autonomous, creative thinker that can break out from conventional solutions
- Work closely with product owners to shape and deliver features.
- Conceptualise experiences and realise them in detailed UI with consideration to brand and automotive requirements
- Create UX design artifacts such as personas, wireframes and flowcharts, experience maps etc.
- Analyse and describe user goals, use cases and workflows

- Develop and maintain design systems and style guides over the product development lifecycle and design UI artifacts including layouts, interaction design, UI elements, icons and animations
- Create mock-ups, prototypes, and simulations to validate the user experience early on, and coordinate with the developer's implementation details to secure the quality in the final product
- Put accessibility, inclusion and privacy at the heart of your design thinking

You'll have:

- Production experience with complex web and native applications
- Solid experience in creating wireframes, user flows, process flows and site maps
- Deep experience working in Figma
- Excellent attention to detail
- Experience working closely with front-end and mobile developers
- A user-first approach to design thinking
- Ability to explain your thoughts on usability, engagement, business / user needs and effectiveness and help grow the skillsets of other designers
- You are familiar with rapid prototyping tools like ProtoPie, Framer, Adobe XD or similar
- **Nice to Have:**
- Knowledge of automotive UX, Interaction design and software development is a big plus.
- Experience working in an Agile/Scrum development process

Equal Opportunities, Diversity & Inclusion

Toyota Connected is proud to be an equal opportunity employer that celebrates the diversity of the communities where we live and do business. Every role is open to all sections of society and we are committed to providing equal opportunities to all. If you have a disability or any other additional need that requires consideration, accommodation or adjustment to the role or recruitment process, please do let us know.
